Appl. No. : unknown
Filed : Herewith

55. The mobile station of Claim 54, wherein said selected period is defined by a period of which said switch is manually held by the user.

56. The mobile station of Claim 54, comprising a data store for storing a group identified for transmission in association with the video image data, to enable the video image data to be transmitted to a plurality of recipient user stations.

57. A mobile communications station having a group dispatch mode of operation, said station comprising a camera for image data capture and means for transmitting said image data in said group dispatch mode.

58. A method of controlling communication between user stations using a GSM-type mobile communications system, said method comprising:

providing a data packet handler connected to a GPRS support node;

holding control data, indicating a state of a call between a first user station and a second user station, in a data store accessible by said data packet handler; and

controlling the transfer of data packets between said first and second user stations via a GPRS data link, using said data packet handler, in accordance with said control data.

REMARKS

The foregoing amendments art to more closely conform the application to U.S. practice.
No new matter is added. Entry of the amendments is respectfully requested.

Respectfully submitted,

KNOBBE, MARTENS, OLSON & BEAR, LLP
